

BlackPearl Eon Browser: Storage for Non-Managed Assets in Avid Environments

Eon Browser

BlackPearl Eon Browser is a source client (application) for Spectra® BlackPearl® Converged Storage System that provides Avid users an easy-to-use tool to store non-managed assets by Avid | Interplay. The intuitive user interface facilitates the management and transfer of files between Avid shared storage (or any network share) and BlackPearl. Eon Browser's simple interface allows users to group, store, search, select and restore content simply by dragging and dropping files between their network shares and BlackPearl.

About Eon Browser

- Runs on Windows, Mac, Linux
- Archives files from local or network storage
- Use for simple, manual archive workflows
- Access files archived by any application to BlackPearl
- Record file transfers with logging feature
- Search files on BlackPearl by name
- Restore files to their original or new location

Eon Browser Benefits

- Simple way to archive non-managed assets
- Maximizes use of production storage
- Significant cost savings
- Easy-to-use and intuitive
- Long-term retention and protection of content
